ZOE

PRACTICE NAVIGATOR · A field guide to time, space, signals, and the next attempt

PILOT'S PRACTICE GUIDE

OBSERVE · ORIENT · DECIDE · REVIEW

TIME	SPACE	NEXT
1	2	3
OBS	FIX	PLAN
PAST	NOW	AGAIN

THE COCKPIT IS A PRACTICE SPACE

Synthetic study · not flight guidance

01 · Plot before you move

A route is a sequence of inspectable choices, not a promise about the future

remaining = max(0, agreed budget - elapsed)

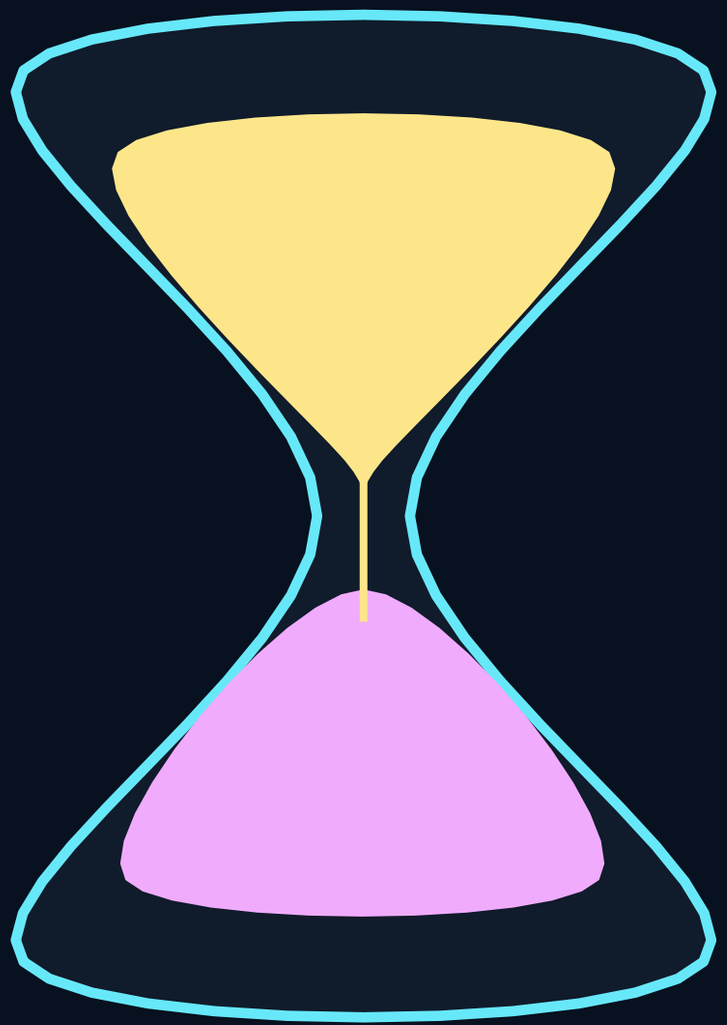
position′ = position + chosen displacement

Toy coordinates only.

No wind, weather, or terrain model.

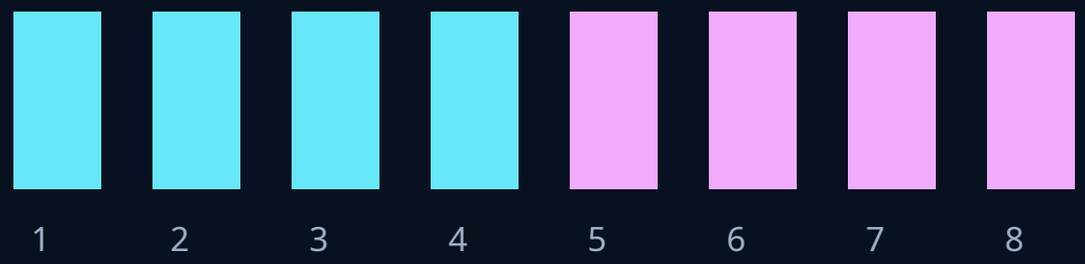
02 · The conserved hourglass

A fixed quantity can move between past and future emphasis without being created



$$w_i(\lambda) = (1-\lambda)e_i + \lambda l_i$$

$\Sigma w_i = 1.0 \cdot \lambda = 0.5$



Normalized toy weights; no transformer is modified.

Conservation is not security or attention control.

Inspired by the supplied Hourglass proposal; untested here.

03 · Signals through the hourglass

Layers hide details; measurements reveal variation, not guarantees

APPLICATION

PRESENTATION

SESSION

TRANSPORT

NETWORK · IP

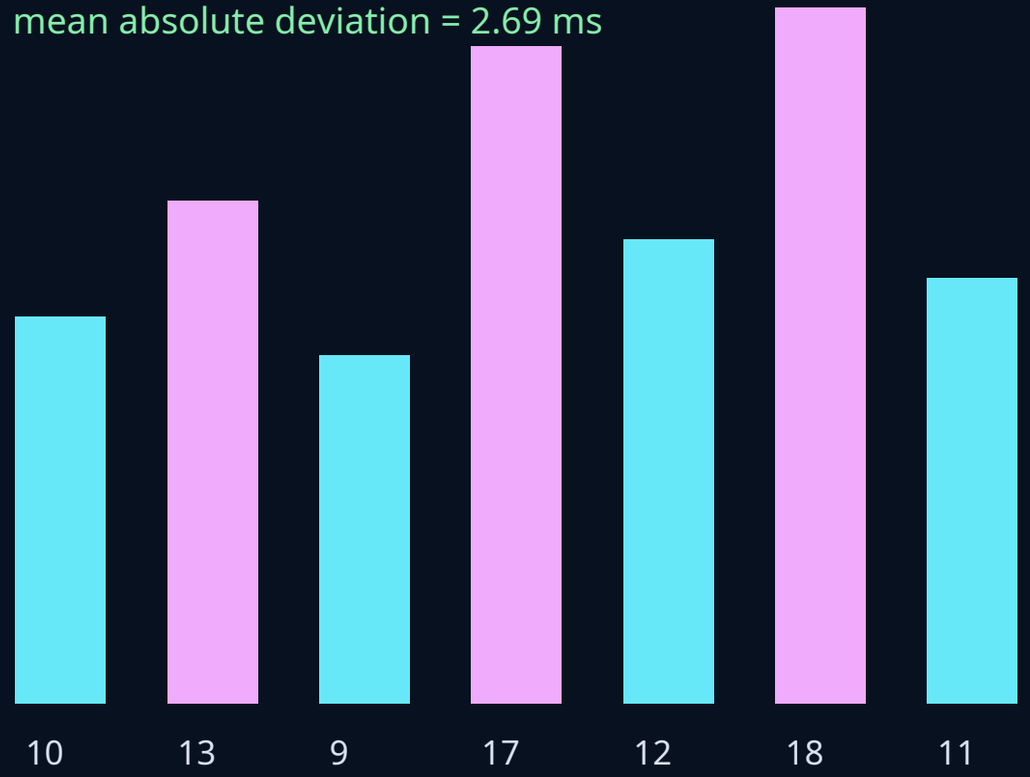
DATA LINK

PHYSICAL

SYNTHETIC ARRIVAL SPACING

mean = 12.86 ms

mean absolute deviation = 2.69 ms



Delay can vary. Clocks can disagree.

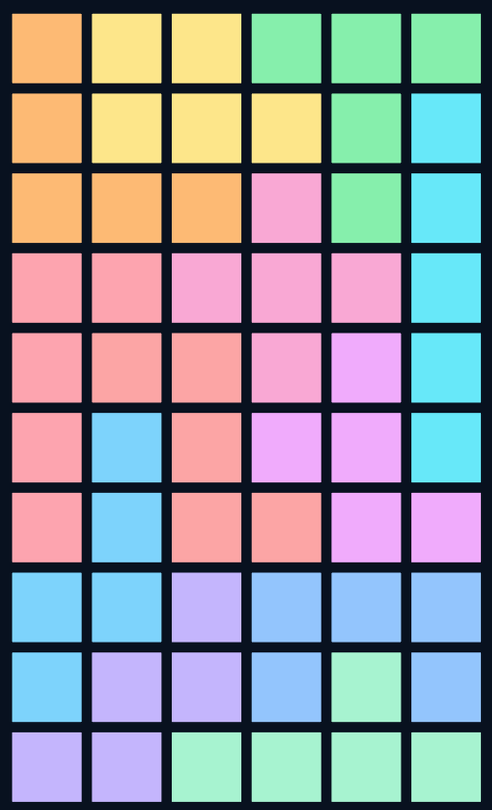
This plot is not a live network measurement.

Not an RTP jitter estimator or offset estimate.

Synthetic study · not flight guidance

04 · Build Rome, then change the clock

Twelve pieces, sixty cells, and the same strategy under different finite budgets



6 × 10 · 12 × 5 = 60

1 s	0 / 12 pieces	timed out
0 cells · 0 holes · same synthetic strategy		
5 s	4 / 12 pieces	timed out
20 cells · 35 holes · same synthetic strategy		
20 s	12 / 12 pieces	won
60 cells · 0 holes · same synthetic strategy		
300 s	12 / 12 pieces	won
60 cells · 0 holes · same synthetic strategy		

One synthetic second per piece · gravity held at 3600 s

A strategy comparison, not a human optimum or IQ measure.

Attempt value = reward + information + future skill + enjoyment - expected failure cost

The attempt-value model is a decision lens, not a biological equation.
